

ELAF<sup>®</sup>

The manufacture  
of films and packaging

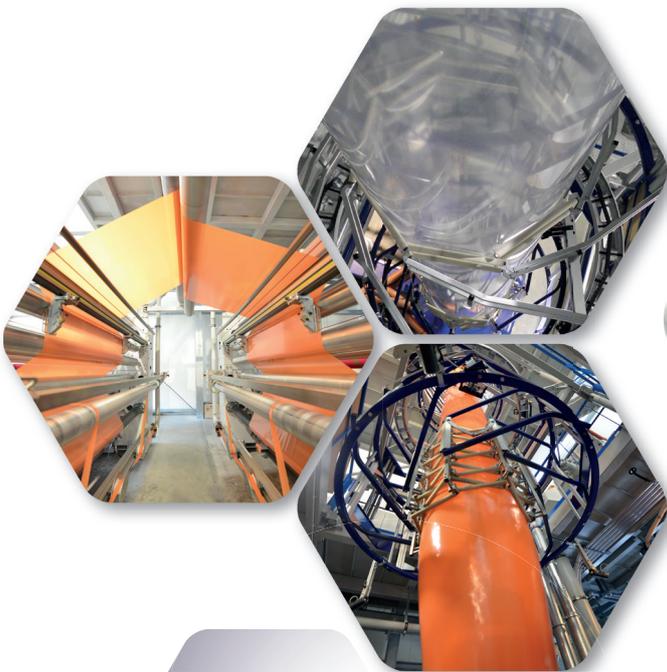

The year of establishment 1980

Over 30 years of experience in film production and a modern machinery park have enabled us to achieve the position of the largest supplier of polyethylene film in Poland.

### Flexographic printing

There are 3 flexo printing machines in our possession. Printing with up to 9 colors in a max width of 1250 mm on each type of film. An option of two-sided printing on thick polyethylene films. Highly qualified staff takes care of the highest possible quality at every stage of printing.

### Production of polyethylene film

Our six three-layer Hosokawa Alpine extruders manufacture about 20.000 tons of the finished product annually:

- heat shrink films in the form of a sleeve, tape and a finished hood
- cold shrink foils
- liner embossed films
- laminating and printing foils such as: standard, HT, AF, PEEL, AS, etc.
- films for packaging frozen foods, fresh vegetables and fruits
- films for packaging hygiene articles
- films for packaging soil, fertilizers and preparations, combustibles, etc.

## Hot embossing

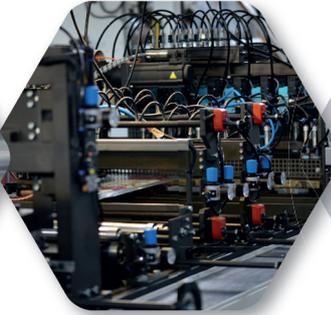

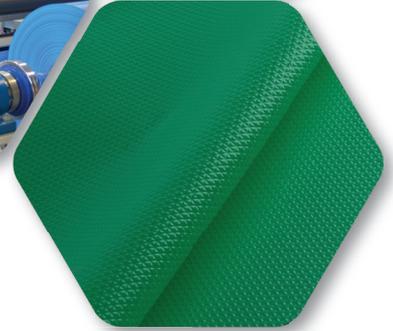

We are a leading producer of embossed film in Europe. These foils are mainly applied in the rubber industry. In the production of finished rubber products, our product serves as a liner between individual layers of a rubber mixture.

The hot stamping pattern (diamond 124 or linear) minimizes the contact surface between the rubber mixture and the film.

Our products are characterized by very good strength parameters and temperature resistance.

There are 3 production machines in our possession with a total capacity of approx. 500 tons per month.

The range of film width 50 - 2500 mm.

## Confectioning

Our machine park contains three cutting machines, packaging materials, which are from 50 to 1300 mm wide.

Each product is produced exactly according to the guidelines of our customers.

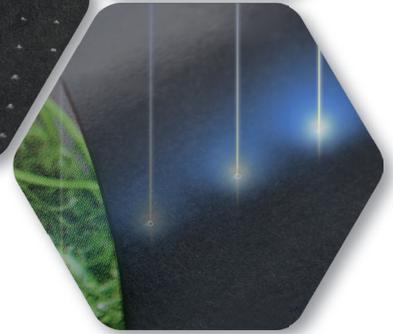

## Production of bags

We offer welding of wicket bags, simple PE, CPP and OPP bags. We have two machines for the production of bags on a roll, mainly used for machine packaging of fresh fruit and vegetables.

## Perforation

Each product can be perforated:

- macro  $\varnothing$  of holes from 6 to 14 mm
- micro hot perforation
- laser
